CUP GRINDERS

Grinding in hard stone applications such as granite.
Used for bull nosing, and grinding of hard to reach spots.
Start with coarse cup grinders and gradually work to fine grit.

- Blue – Extra Course (high abrasive)
- Yellow – Coarse
- Brown – Medium Grit
- Green – Fine Grit (low abrasive)

GRINDING SHOES

Three Segmented grinding shoes consist of three diagonal brazed segments on a steel blank. The shoes are used for grinding in hard stone applications and preparation for polishing.
It fits on standard Genilin grinders and fastening holes need to be specified.

POLISHING SHOES

Diamond Shoes need not be changed as regularly as conventional abrasive shoes. An excellent life span, fast and smooth polishing and the ability to polish large surface areas.
6 Grades of usage in all classes of hard stones.
0 being a grinding application after cutting a slab.
6 = 220 grit for polishing preparation purposes.

POLISHING PADS

Resin pads for polishing or buffing on all straight or curved granite and marble edges. The polishing pads are suited for wet applications.

Backing pads are available with a 5/8" or M14 thread.

The pads should be used on hand held machines. Polishing pads are mainly used onsite for finishing off on-site cutting.

PROFILING WHEELS

Profiling wheels are offered with various types of connector systems and manufactured according to the type of material to be processed and the machinery on which they will be mounted.

Profiling wheels are suited for use on most profile grinding machines. Grit sizes are available in Fine, Medium, Coarse and Extra Coarse options.
